The global Air Conduction Headphones market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The limiting factors for the development of air conduction headphones mainly include the following points:

The technical threshold is high: air conduction headphones need to solve the problem of how to effectively conduct sound to the ears, which requires technologies in multiple fields such as sound propagation, electronic engineering, and ergonomics. At present, air conduction headphone technology is not yet fully mature, and there are still some technical problems that need to be overcome.

Higher price: Due to the high technical threshold of air conduction earphones, their manufacturing costs are also relatively high, resulting in higher market prices. This may deter some consumers and limit the marketing and application of air conduction headphones.

Lack of awareness: At present, air conduction headphones are relatively new on the market, and consumers' awareness of them is relatively low. This may affect consumer acceptance and purchase intention of air conduction headphones.

Market competition is fierce: At present, the headphone market is relatively mature, and various types of headphone brands and products are emerging in endlessly. As an emerging form of earphones, air conduction earphones need to face market competition from traditional earphones, which may put certain pressure on their market promotion and application.
