According to our (Global Info Research) latest study, the global Air-cooled Diesel Engines market size was valued at US\$ 691 million in 2024 and is forecast to a readjusted size of USD 850 million by 2031 with a CAGR of 3.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Air-cooled diesel engines are diesel engines that rely on air flow for cooling instead of a liquid cooling system. Unlike water-cooled engines, they do not require a complex coolant system; instead, heat dissipation is achieved through air circulation around the engine. This design simplifies the structure, reduces maintenance costs, and increases reliability. Air-cooled diesel engines are known for their high-temperature resistance, low maintenance needs, compact design, and reliability, making them widely used in agricultural machinery, construction equipment, generator sets, and some vehicles, particularly in areas with harsh conditions or limited access to stable water sources.
