According to our (Global Info Research) latest study, the global Air-Cooled Racks market size was valued at US\$ 738 million in 2025 and is forecast to a readjusted size of US\$ 1001 million by 2032 with a CAGR of 4.5% during review period.

The working principle of Air-Cooled Racks is mainly based on heat conduction and convection of air. When the internal equipment is running, heat is generated, and this heat is transferred to the surrounding air through the heat sink or heat dissipation components. Then, the hot air is discharged outside the rack through fans or natural convection, and new cold air is introduced to form a cycle, thereby continuously removing heat and reducing the temperature inside the rack.
