According to our (Global Info Research) latest study, the global Air-cooled Refrigeration Unit market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The air-cooled refrigeration unit is a kind of industrial cooling equipment equipped with a compression refrigeration circuit, using air as the cooling medium of the condenser, and using water as the refrigerant. It mainly includes a compressor, a condenser, an evaporator, and a throttling device (expansion valve) four main components.

The air-cooled refrigeration unit uses an air-cooled condenser to dissipate heat, does not require additional water circuits and water-cooling equipment, and is relatively simple to install and maintain. It is suitable for some places without water supply conditions.
