The global Air Cooled Vibration and Shock Test System market size is expected to reach \$ 1092.5 million by 2029, rising at a market growth of 9.6% CAGR during the forecast period (2023-2029).

An air-cooled vibration test system is a specialized equipment used to subject a device or structure to controlled vibrations for testing purposes. It is designed to simulate real-world vibration conditions and assess the durability, reliability, and performance of the tested object. Unlike water-cooled systems that use liquid to dissipate heat, an air-cooled system uses air for cooling, making it more suitable for certain applications and environments.
