## Abstracts

According to our (Global Info Research) latest study, the global Air-Cushion Lifting System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes. In general, the market outlook for air-cushion lifting systems is expected be positive due to the increasing demand for more efficient and cost-effective solutions for heavy load transportation and handling. Air-cushion lifting systems offer a range of benefits such as increased productivity, reduced labor requirements, and improved safety, which are expected to further drive the market growth. Additionally, advancements in technology are expected to drive the market growth for air-cushion lifting systems. However, the availability of alternative lifting systems and the high initial cost of air-cushion lifting systems may limit market growth to some extent. Overall, the market outlook for air-cushion lifting systems is expected to be positive over the forecast period, supported by the growth of various industries and advancements in technology.

The air-cushion lifting system is a technology that uses air pressure to lift and move heavy objects. It works by creating a layer of pressurized air between the object being lifted and the ground or other surface, which allows for easy movement without friction. Using an air-cushion lifting system, objects can be moved smoothly and easily as the pressurized air eliminates the friction between the object and the ground. This technology is often used in manufacturing, logistics, and transport industries to move heavy machinery, containers, and other large objects more efficiently. Air-cushion lifting systems are also used in some military applications, such as the movement of heavy equipment and vehicles across difficult terrain or in strategic situations where speed and flexibility are essential. Overall, the air-cushion lifting system provides a safe, efficient, and cost-effective way to move heavy objects, while reducing the need for heavy

equipment and manpower.
