Air Decontamination System is to use the relatively closed space in the casing to suck the indoor sterile air into the disinfection equipment equipped with plasma, ultraviolet rays, ozone, negative ions and filters. After disinfection, sterilization, purification and adsorption, After the dust removal treatment, it is output outside the machine, and the cycle is repeated, so that the indoor air quality can reach the sensory control standard, and the whole disinfection process will not cause harm to the indoor activities, which not only ensures the disinfection and sterilization effect, but also solves the problem of traditional ultraviolet radiation or chemical treatment. The air disinfection method cannot be used continuously in the presence of people. It has no pollution to the environment, no corrosion to the equipment, and is easy to operate. After the program control is set, the disinfection program can be controlled manually and automatically.
