## Abstracts

According to our (Global Info Research) latest study, the global Air Defense Radar market size was valued at USD 6698.5 million in 2022 and is forecast to a readjusted size of USD 8998.2 million by 2029 with a CAGR of 4.3% during review period.

Air-Defense Radars can detect air targets and determine their position, course, and speed in a relatively large area. The maximum range of Air-Defense Radar can exceed 300 miles, and the bearing coverage is a complete 360-degree circle. Air-Defense Radars are usually divided into two categories, based on the amount of position information supplied. Radar sets that provide only range and bearing information are referred to as two-dimensional, or 2D, radars. Radar sets that supply range, bearing, and height are called three-dimensional, or 3D, radars.

Changing modern war systems have been urging governments across the world to allocate higher funds towards respective military forces. The military budget allocation enables defense forces to procure advanced technologies and equipment from domestic or international manufacturers.
