Abstracts

The global Air Defense Radar market size is expected to reach \$ 8998.2 million by 2029, rising at a market growth of 4.3% CAGR during the forecast period (2023-2029).

Changing modern war systems have been urging governments across the world to allocate higher funds towards respective military forces. The military budget allocation enables defense forces to procure advanced technologies and equipment from domestic or international manufacturers.

Air-Defense Radars can detect air targets and determine their position, course, and speed in a relatively large area. The maximum range of Air-Defense Radar can exceed 300 miles, and the bearing coverage is a complete 360-degree circle. Air-Defense Radars are usually divided into two categories, based on the amount of position information supplied. Radar sets that provide only range and bearing information are referred to as two-dimensional, or 2D, radars. Radar sets that supply range, bearing, and height are called three-dimensional, or 3D, radars.
