Air die grinder is a hand-held tool powered by compressed air, which is specially used for tasks such as fine grinding, grinding, polishing and cutting. It uses a pneumatic motor to drive a high-speed rotating grinding head or cutting tool, and is lightweight, portable and efficient. Because it uses compressed air as a power source, pneumatic die grinders are not easy to heat up, suitable for long-term continuous operation, and are also safer in flammable and explosive environments. It is widely used in mold manufacturing, metal processing, automobile maintenance and other fields, and is an important tool in the industrial and maintenance industries.
