## Abstracts

According to our (Global Info Research) latest study, the global Air-driven Dental Turbine market size was valued at USD 92 million in 2022 and is forecast to a readjusted size of USD 159.3 million by 2029 with a CAGR of 8.2% during review period.

The development trend for air-driven dental turbines is focused on improving efficiency, ergonomics, and infection control. Manufacturers are developing smaller and lighter air-driven dental turbines to improve maneuverability and reduce hand fatigue for dentists. These compact turbines also allow for better access to hard-to-reach areas in the oral cavity. There is a growing demand for air-driven dental turbines with higher power and speed capabilities. This enables dentists to perform procedures more efficiently and reduces the time patients spend in the dental chair. Noise is a common concern in dental practices, as it can cause anxiety and discomfort for patients. Manufacturers are working on reducing the noise generated by air-driven dental turbines to create a more pleasant environment for both patients and dental professionals.
