Abstracts

The global Air-driven Dental Turbine market size is expected to reach \$ 159.3 million by 2029, rising at a market growth of 8.2% CAGR during the forecast period (2023-2029).

The development trend for air-driven dental turbines is focused on improving efficiency, ergonomics, and infection control. Manufacturers are developing smaller and lighter air-driven dental turbines to improve maneuverability and reduce hand fatigue for dentists. These compact turbines also allow for better access to hard-to-reach areas in the oral cavity. There is a growing demand for air-driven dental turbines with higher power and speed capabilities. This enables dentists to perform procedures more efficiently and reduces the time patients spend in the dental chair. Noise is a common concern in dental practices, as it can cause anxiety and discomfort for patients. Manufacturers are working on reducing the noise generated by air-driven dental turbines to create a more pleasant environment for both patients and dental professionals.

This report studies the global Air-driven Dental Turbine production, demand, key manufacturers, and key regions.
