The global Air Forming Machine market size is expected to reach \$ 1339 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

Air forming machine, also known as thermoforming machines, are thermoforming devices that heat plastic sheets to soften them, then use vacuum suction to adhere the sheets to the surface of a mold, thereby obtaining the desired shape.

Upstream raw materials mainly include plastic sheets and plates, aluminum alloy and steel molds. Core components include heating systems, pneumatic systems, electrical control systems, and vacuum systems. Midstream technological barriers mainly lie in heating control, pressure control, and mold adaptation. Downstream applications are primarily in the packaging, automotive, home and daily necessities, industrial parts, and electronic products industries.

In 2025, global sales of Air forming machines reached 35,600 units, with a production capacity of 54,000 units, an average selling price of US\$24,500 per unit, and an average gross profit margin of 28%-32%.
