According to our (Global Info Research) latest study, the global Air & Gas Compressor market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Air and Gas Compressor is a device that converts power (usually from an electric motor, a diesel engine or a gasoline engine) into kinetic energy by compressing and pressurizing air. The energy in the compressed air can be stored while the air remains pressurized. The energy can be used for a variety of applications, usually by utilizing the kinetic energy of the air as it is depressurized.

North America is estimated to account for majority market share in the global air & gas compressor market over the next seven years owing to the all-time high, new exploration activities paired with shale boom, fueling the market for truck usage in oil and gas industries in this region. Furthermore, presence of numerous manufacturers and growing adoption of compressors in this region may also contribute positively to market augmentation. Government mandates pertaining to the use of air & gas compressor may also drive the regional market growth in North America and Europe. Asia Pacific is expected to exhibit high growth owing to increasing development activities in countries such as China, India, and Japan. In addition, outsourcing of essential manufacturing processes to these developing countries owing to low labor cost is also expected to drive market growth in this region.
