## Abstracts

The global Air Horn and Compressor System market size is expected to reach \$ 230.4 million by 2029, rising at a market growth of 3.9% CAGR during the forecast period (2023-2029).

An air horn and compressor system is a type of signaling system that uses compressed air to produce a loud and distinctive sound. The system typically consists of an air compressor, a storage tank, and one or more air horns. The compressor pumps air into the storage tank, where it is stored until needed. When the air horn is activated, the stored air is released into the horn, producing a loud and attention-grabbing sound.
