## Abstracts

According to our (Global Info Research) latest study, the global Air Quality Wet Scrubbers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The term wet scrubber describes a variety of devices that remove pollutants from a furnace flue gas or from other gas streams. In a wet scrubber, the polluted gas stream is brought into contact with the scrubbing liquid, by spraying it with the liquid, by forcing it through a pool of liquid, or by some other contact method, so as to remove the pollutants.

Asia-Pacific is expected to dominate the demand for air quality wet scrubbers. The demand is expected to rise majorly, owing to the rapidly increasing construction activities in the region, which has led to a massive increase in the pollution levels. Additionally, in India, the increasing rate of coal consumption, illegal mining operations, and less efficient industrial processes have led to the deterioration of air quality. The country has also been witnessing growth of industrial sector, driven by the government's "Make in India" campaign, which adds to the need for air quality wet scrubbers.
