## Abstracts

The global Air Showers for Contamination Control market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Air showers are specialized enclosed antechambers which are incorporated as entryways of cleanrooms and other controlled environments to reduce particle contamination. Air showers utilize high-pressure, HEPA- or ULPA-filtered air to remove dust, fibrous lint and other contaminants from personnel or object surfaces. The forceful 'cleansing' of surfaces prior to entering clean environments reduces the number of airborne particulates introduced.

This report studies the global Air Showers for Contamination Control production, demand, key manufacturers, and key regions.
