Abstracts

The global Air Source Heat Pump market size is expected to reach \$ 69250 million by 2029, rising at a market growth of 16.3% CAGR during the forecast period (2023-2029).

Global key players of air source heat pump include Daikin Industries, Mitsubishi Electric, Fujitsu General, etc. The top three players hold a share about 20%. North America is the largest market, has a share about 42%, followed by Asia-Pacific and Europe, with share 37% and 18%, separately.

Air Source Heat Pump (ASHP) is a device which uses a vapor compression cycle to transfer heat between outdoor air and indoor air or water. There are two type of air source heat pumps including air-to-air heat pumps and air-to-water heat pumps. As the name implies, these systems heat or cool indoor air or move energy into water. An air-source heat pump can provide efficient heating and cooling for your home, especially if you live in a warm climate. When properly installed, an air-source heat pump can deliver one-and-a-half to three times more heat energy to a home than the electrical energy it consumes. This is possible because a heat pump moves heat rather than converting it from a fuel, like in combustion heating systems.

This report studies the global Air Source Heat Pump production, demand, key manufacturers, and key regions.
