Air Spring Bellows are flexible, inflatable components made from reinforced elastomeric materials, designed to contain and manage compressed air to provide shock absorption, vibration isolation, or actuation. When air is pumped into the bellows, they expand and can support loads, cushion impacts, or create controlled motion, depending on the application. Air spring bellows are widely used in vehicle suspension systems, industrial machinery, and automation equipment to enhance comfort, reduce wear, and improve performance. Their ability to handle variable loads and harsh environments with minimal maintenance makes them a reliable and versatile solution for both dynamic and static applications.
