The global Air Spring Shock Absorber market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Air spring shock absorber is a kind of pneumatic shock absorber used in vehicle suspension system, which provides suspension support and shock absorption effect by injecting gas (usually nitrogen gas). It consists of a shock absorber, a piston rod, an air spring and an air pressure regulator. The air spring shock absorber is adjustable, and the suspension height and hardness can be adjusted by adjusting the gas pressure to adapt to different road and load conditions. It provides better shock absorption effect, makes the vehicle run more smoothly and comfortably, and can adjust the suspension height according to the load condition of the vehicle to maintain a reasonable body height.
