Abstracts

According to our (Global Info Research) latest study, the global Air Starting System market size was valued at US\$ 517 million in 2025 and is forecast to a readjusted size of US\$ 733 million by 2032 with a CAGR of 5.2% during review period.

An air starting system is a mechanism used to start large diesel or gas engines, particularly in marine, industrial, and power generation applications, by utilizing compressed air. Instead of relying on an electric starter motor, the system injects compressed air directly into the engine cylinders, creating the necessary pressure to turn the engine over and initiate the combustion process. This method is especially effective for engines that are too large for electric starters, offering reliable and powerful starting capabilities even in harsh conditions. The system typically includes components such as air compressors, air reservoirs, starting valves, and piping to deliver and control the air supply efficiently.
