According to our (Global Info Research) latest study, the global Air Suspension market size was valued at USD 6442.8 million in 2023 and is forecast to a readjusted size of USD 9167.6 million by 2030 with a CAGR of 5.2% during review period.

Air suspension is a type of vehicle suspension powered by an electric or engine-driven air pump or compressor. This compressor pumps the air into a flexible bellows, usually made from textile-reinforced rubber. The air pressure inflates the bellows, and raises the chassis from the axle.

Non-electronically controlled air suspension systems dominate the global market, in terms of both value and volume however, the electronically controlled air suspension systems segment is the fastest growing globally, in terms of both value and volume. This is owing to the electronically controlled air suspension systems are more advanced and comfort with less maintenance as compared with non-electronically controlled air suspension systems. Still, considering the complexity and the cost of these electronically controlled air suspension systems, their existing demand is limited to premium vehicles only.

The Global Info Research report includes an overview of the development of the Air Suspension industry chain, the market status of Passenger Cars (Electronically Controlled Air Suspension System, Non-Electronically Controlled Air Suspension System), LCVs (Electronically Controlled Air Suspension System, Non-Electronically Controlled Air Suspension System), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Air Suspension.

Regionally, the report analyzes the Air Suspension markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness.
