Abstracts

An air tank for air suspension is a component used in vehicles equipped with air suspension systems. These tanks store compressed air generated by the vehicle's air compressor and serve several important functions:

Air Storage: The primary function of the air tank is to store compressed air. This stored air is used to provide the necessary pressure for inflating air springs or airbags that support the vehicle's suspension system.

Pressure Regulation: Air tanks help regulate air pressure within the suspension system. They maintain a consistent pressure level, ensuring optimal performance and stability of the vehicle's ride height and handling characteristics.

Supply Reserve: The tank acts as a reserve supply of air, ensuring that the suspension system has an adequate air source even when the vehicle's compressor is not actively generating air. This is particularly useful during sudden changes in load or when the vehicle is parked.

According to our (Global Info Research) latest study, the global Air Tank for Air Suspension market size was valued at US\$ 324 million in 2023 and is forecast to a readjusted size of USD 596 million by 2030 with a CAGR of 9.4% during review period.

Automotive Industry Trends: As automotive manufacturers focus on enhancing ride quality and vehicle performance, the demand for air suspension systems equipped with air tanks is likely to grow. This trend is particularly noticeable in luxury vehicles, high-performance cars, trucks, and commercial vehicles.

Rising Demand for Commercial Vehicles: Commercial vehicles such as trucks, buses, and trailers often utilize air suspension systems to manage heavy loads, provide stability, and improve driver comfort. The growing demand for commercial vehicles globally is expected to drive the market for air tanks used in air suspension systems.

Aftermarket Demand: The aftermarket segment for air suspension components, including air tanks, is significant. Enthusiasts, vehicle owners, and commercial fleet operators may upgrade or replace existing suspension systems with air suspension kits, boosting the demand for air tanks in this segment.
