Abstracts

According to our (Global Info Research) latest study, the global Air Texturing Machine (ATY Machine) market size was valued at US\$ 569 million in 2025 and is forecast to a readjusted size of US\$ 787 million by 2032 with a CAGR of 4.9% during review period.

Air texturing machines are specialized textile devices that utilize high-speed compressed air jets to open, disturb, entangle, and loop synthetic continuous filaments, transforming smooth strands into bulky, soft yarns that resemble spun (staple fiber) yarns. These machines process raw filaments such as polyester, nylon, and polypropylene; by adjusting parameters including air pressure, overfeed ratio, draw ratio, and winding tension manufacturers can produce air-textured yarns with diverse structural and performance characteristics.

Upstream suppliers include providers of synthetic raw filaments, air-jet nozzles, compressed air systems, servo motors, variable frequency drives (VFDs), sensors, heating units, and industrial control systems. Downstream sectors encompass enterprises involved in synthetic fiber processing, weaving, knitting, apparel, home textiles, automotive interiors, carpeting, and technical textiles.

The global market for air-jet texturing machines features an average unit price of \$165,000, with annual sales of approximately 3,350 units and a total annual production capacity of around 4,100 units; the industry profit margin stands at 25%.

The future global market for air-jet texturing machines will evolve toward higher speeds, greater intelligence, energy efficiency, and increased flexibility. Driven by rising demand for differentiated and functional yarns in apparel, home textiles, automotive interiors,

and technical textiles, there will be growing interest in equipment capable of processing multi-component, fine-denier, coarse-denier, and recycled fibers. Technologies such as independent spindle drives, in-line tension and yarn defect monitoring, automatic recipe switching, remote diagnostics, and predictive maintenance will become increasingly widespread. Manufacturers will continue to optimize nozzle, heating, and compressed air systems to reduce energy consumption and production costs. Furthermore, equipment integration with spinning, winding, warehousing, and manufacturing execution systems (MES) will be enhanced to improve changeover efficiency and quality stability for multi-variety, small-batch orders.
