## Abstracts

The air tightness leak detector uses the latest microcomputer chip, high-precision sensor and zero-leak solenoid valve to ensure the accuracy of the test results and the durability of the instrument. The microcomputer automatically controls the detection process and collects data, and uses the latest algorithms and special software to analyze and process the data, which compensates for the temperature (including environmental temperature) during the detection process to the greatest extent. It overcomes external interference and realizes direct pressure difference leak detection. The detection result is intuitive and has a high cost performance ratio. It is an ideal equipment for many air tightness detection.
