The global Air Traffic Control Radar Systems market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Air Traffic Control (ATC) Radar Systems are sophisticated technology and infrastructure used to monitor and manage the movement of aircraft in airspace and on runways at airports. These radar systems play a crucial role in ensuring safe and efficient air traffic management by providing real-time information to air traffic controllers about the location, altitude, speed, and direction of aircraft. This information helps controllers guide aircraft, prevent collisions, and maintain orderly flow in the skies.

ATC radar systems are crucial for maintaining aviation safety, reducing congestion, and minimizing delays. They provide controllers with the information needed to make informed decisions, guide aircraft through various phases of flight, and respond to changing conditions or emergencies effectively.
