## Abstracts

According to our (Global Info Research) latest study, the global Air Traffic Control Tower Displays market size was valued at US\$ 170 million in 2025 and is forecast to a readjusted size of US\$ 258 million by 2032 with a CAGR of 6.1% during review period.

Air Traffic Control Tower Displays are mission-critical visual display devices and directly related display-chain modules used in airport control towers, approach control facilities, area control centers, remote towers and digital tower controller working positions. The scope of this study focuses on professional display products used to present radar situation data, runway and apron traffic, flight plans, electronic flight strips, meteorological information, alerts, enhanced video views and collaborative tower-control information. Typical product forms include primary radar displays, high-bright tower control monitors, auxiliary touch displays, 2K-by-2K ATC displays, display servers, graphics boards, video recording, encoding and streaming modules, as well as visualization components embedded in digital tower or controller working-position systems. These products are characterized by high reliability, stable brightness, long operating life, low noise, redundant power design, precise visual performance, environmental robustness, maintainability and compatibility with ATC automation and tower control systems.

Based on our research, ATC tower displays represent a small but mission-critical niche market rather than a general-purpose display market. The industry is shaped by safety requirements, controller ergonomics, long replacement cycles, interface compatibility and continuous-operation reliability. Under the narrow scope, the market mainly covers primary radar displays, high-bright tower monitors, auxiliary touch displays, graphics boards, display servers, recording and streaming modules. Under a broader system-

adjacent scope, visualization components embedded in digital towers, remote towers and controller working positions also become relevant. This distinction is important because the supplier base includes both dedicated display OEMs and tower-system suppliers, but only the display and HMI-related portion should be counted in the revenue model.

From the demand side, the market is driven less by a rapid increase in the number of towers and more by replacement, modernization and functional upgrades. Drivers include the renewal of legacy ATC systems, deployment of remote and digital towers, runway-safety investment, higher visual-performance requirements, and the need to consolidate traffic, weather, electronic flight-strip and camera information at controller positions. We estimate the global narrow-scope market at USD 165.00 million in 2025 and USD 176.50 million in 2026, with a 2026–2032 CAGR of about 6.20%. The key upside lies in digital tower visualization and integrated working-position upgrades, while the main downside risk is slower public-sector procurement and bundling of display components into large ATM automation contracts.
