## Abstracts

According to our (Global Info Research) latest study, the global Air Turbo Blowers market size was valued at USD 483.7 million in 2023 and is forecast to a readjusted size of USD 970.5 million by 2030 with a CAGR of 10.5% during review period.

The air turbo blowers also known as air bearing turbo blowers or air foil bearing turbo blowers.

The core technology of air turbo blowers is air bearing. During high-speed rotation, a hydrodynamic pressure is formed between the shaft and the journal bearing. The air bearing is a non-contact that does not cause friction in the rotor, so suitable for semi-permanent operation because no wear occurs during rotation. Clean air can be produced since air acts as a lubricant instead of oil.
