Abstracts

According to our (Global Info Research) latest study, the global Airbag Control Modules market size was valued at US\$ 9199 million in 2025 and is forecast to a readjusted size of US\$ 15403 million by 2032 with a CAGR of 7.6% during review period.

In 2025, global Airbag Control Module output reached about 500 million units and global capacity of around 750 million units. The average price is about USD 18 per unit, with gross margins near 26%. An airbag control module (ACM) is a critical automotive electronic unit that detects collisions and triggers airbag deployment by processing data from crash sensors, accelerometers, and sometimes gyroscopes in real time, ensuring airbags inflate within milliseconds to protect occupants; it also records crash data for diagnostics. The supply chain for ACMs is highly specialized and global, beginning with raw semiconductor materials and electronic components (such as microcontrollers, MEMS sensors, and capacitors) supplied by chip manufacturers, followed by Tier 2 and Tier 1 automotive suppliers who design and assemble the modules into safety systems, which are then integrated by automakers (OEMs) into vehicles during production; the chain is tightly regulated for safety compliance (e.g., ISO 26262), requires rigorous testing and redundancy, and is sensitive to disruptions in semiconductor supply, logistics, and quality control due to the safety-critical nature of the product.
