Abstracts

Airborne photoelectric pods are typically equipped with electro-optical sensors such as forward-looking infrared cameras, television cameras, and laser designators/rangefinders. According to the functions, there are mainly two types of onboard navigation pods and targeting pods. With the continuous development of precision-guided weapon technology, the aviation optoelectronic pod has become an important part of the precision strike system of fighter jets. It isolates the attitude change of the carrier aircraft and the influence of mechanical vibration on the pointing of the photoelectric sensor. At the same time, it uses the photoelectric sensor to complete the search, positioning and tracking of the target.
