Abstracts

Aircraft Arresting System is a mechanical system used to rapidly decelerate an aircraft as it lands. Typical systems consist of several steel wire ropes laid across the aircraft landing area, designed to be caught by an aircraft's tailhook. During a normal arrestment, the tailhook engages the wire and the aircraft's kinetic energy is transferred to hydraulic damping systems attached below the carrier deck. There are other related systems which use nets to catch aircraft wings or landing gear. These barricade and barrier systems are only used for emergency arrestments for aircraft without operable tailhooks

Scope of the Report:

This report focuses on the Aircraft Arresting System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Among types, the Engineered Material Arresting System (EMAS) segment is projected to grow at the highest CAGR during the forecast period; the cable segment is projected to lead the market during the forecast period. Factors such as mandatory installation of EMAS at airports having runway safety length less than 1,000 feet and increasing spending on runway safety measures are expected to drive the market. The worldwide market for Aircraft Arresting System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
