Abstracts

Aircraft autopilot system improves the precision of navigation, decreases the need for human involvement and helps in guiding the pilot and monitoring the route in case of unsafe situations to avoid risks of accidents. The section is designed to cutback the workload of the cockpit, and increase the efficiency of the pilot in regulating the flight. Autopilot system also reduces the overall operating cost.

SCOPE OF THE REPORT:

This report focuses on the Aircraft Autopilot System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The role of autopilots has broadened significantly from pilot assistance, it now includes automated landing and also taking full control of aircraft in emergency situations.

However, autopilots can never replace a human operator, but only assist in various operations such as monitoring the weather, systems, and trajectory.

The worldwide market for Aircraft Autopilot System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
