Auxiliary Power Units (APUs) are gas turbine engines used primarily during aircraft ground operation to provide electricity, compressed air, and/or shaft power for main engine start, air conditioning, electric power and other aircraft systems. APUs can also provide backup electric power during in-flight operation.

Scope of the Report:

This report focuses on the Aircraft Auxiliary Power Unit (APU) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The aircraft APU provides power to start the main engines. Turbine engines compressors must be turned to a significant speed for self-sustaining operation. Before the engines are to be turned, the APU is started, generally by a battery or hydraulic accumulator. Once the APU is running, it provides power (electric, pneumatic, or hydraulic, depending on the design) to start the aircraft's main engines.

Geographically, the consumption market is leading by North America and Europe, sales in Asia Pacific regions like China, Japan, Southeast Asia and India will see significant growth in future period. North America holds the largest market share, with about 1264 Units sold in 2017, followed by Europe, with about 38.45% market share.

Honeywell Aerospace and Pratt & Whitney are the biggest two players in Aircraft Auxiliary Power Unit (APU) market, with about 25.03% and 15.56% output market share separately in 2017. Other leading market players in Aircraft Auxiliary Power Unit (APU) market include Aerosila, Safran, PBS Velka Bites, Technodinamika etc. the market competition may become more intense with more innovation products, acquisitions and
