According to our (Global Info Research) latest study, the global Aircraft Brakes market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

In aeronautics, air brakes or speed brakes are a type of flight control surfaces used on an aircraft to increase drag or increase the angle of approach during landing. Air brakes differ from spoilers in that air brakes are designed to increase drag while making little change to lift, whereas spoilers reduce the lift-to-drag ratio and require a higher angle of attack to maintain lift, resulting in a higher stall speed.

North America is projected to lead the aircraft brake system market during the forecast period. The aircraft brake system market in Europe and Asia-Pacific is anticipated to witness significant growth, owing to the increase in demand for cost-effective and highly reliable aircraft brake system components.
