According to our (Global Info Research) latest study, the global Aerostructure Equipment market size was valued at USD 2276.4 million in 2023 and is forecast to a readjusted size of USD 3177.8 million by 2030 with a CAGR of 4.9% during review period.

An aerostructure is a component of an aircraft's airframe. This may include all or part of the fuselage, wings, or flight control surfaces. Companies that specialize in constructing these components are referred to as 'aerostructures manufacturers,' though many larger aerospace firms with a more diversified product portfolio also build aerostructures.

Aircraft production is on the rise and the demand is fueled by a number of global factors. Despite a trend towards loading efficiency, route consolidation, and the geopolitical situation of countries such as Russia resulting in some limitations, the world GDP is up and a wealthier, growing population is leading to a higher volume of flights. In the EU especially, there is higher demand for more eco-friendly and fuel-efficient aircraft, and emerging and expanding markets are supported by large investments in China and Mexico's attractive workforce.

The Global Info Research report includes an overview of the development of the Aerostructure Equipment industry chain, the market status of Civilian (Fastening Systems, Composite Systems), Military (Fastening Systems, Composite Systems), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Aerostructure Equipment.
