An Aircraft Composite Drive Shaft is a type of drive shaft used in aircraft that is made from composite materials. These materials, often consisting of carbon fibers or other high-strength fibers embedded in a matrix such as epoxy, provide superior strength-to-weight ratios and resistance to fatigue compared to traditional metallic drive shafts. Composite drive shafts are designed to withstand the rigorous demands of aerospace applications, including high rotational speeds, varying loads, and the need for lightweight components to improve fuel efficiency and performance. They are integral to the power transmission systems of modern aircraft, particularly in advanced designs where weight reduction and performance enhancement are critical.
