According to our (Global Info Research) latest study, the global Aircraft Composite Maintenance market size was valued at US\$ 5638 million in 2024 and is forecast to a readjusted size of USD 8799 million by 2031 with a CAGR of 6.6% during review period.

Aircraft composite materials are composed of multiple material layers. In an environment with uneven cold and heat, the different temperature tolerances of the various constituent materials can easily cause damage to components. Therefore, with the increase in the application of composite materials in general aviation, the aviation composite material maintenance market has formed a certain scale, and aircraft composite material maintenance can restore the integrity and safety of aircraft structures to the greatest extent.

There are not many enterprises in China's aviation composite material maintenance industry, and the market competition is relatively moderate. In the future, as the number of aircraft in China continues to increase, the demand for aviation composite material maintenance will further increase, which may attract new companies to enter, making the aviation composite material maintenance market more competitive.
