## Abstracts

According to our (Global Info Research) latest study, the global Aircraft Design Services market size was valued at US\$ 4836 million in 2025 and is forecast to a readjusted size of US\$ 6815 million by 2032 with a CAGR of 5.1% during review period.

Aircraft design services refer to the professional technical services provided throughout the entire process of various aircraft development, from conceptual design to engineering implementation. These services encompass overall design, system design, structural and material design, performance analysis, digital simulation, and airworthiness certification support. Typically provided by aerospace engineering companies, specialized design institutions, or in-house teams of aircraft manufacturers, these services are highly technology-intensive, involve interdisciplinary collaboration, and are subject to strict compliance requirements. They are a core link in the aviation industry chain, determining product performance, safety, and commercial competitiveness.

With the long-term growth in global air transport demand, the accelerated transformation to green aviation, and the rapid development of next-generation flight technologies, aircraft design services are entering a new round of technology-driven growth. Airlines and manufacturers not only need to develop more energy-efficient and low-emission aircraft but also need to improve operational efficiency and passenger experience, placing higher demands on design capabilities. Simultaneously, the application of digital engineering, advanced materials, and automated design tools significantly improves design efficiency and innovation capabilities. Furthermore, the deepening of global supply chain specialization means that more and more design work is outsourced to professional engineering service companies, driving the continued

expansion of the design services market. Therefore, as a core technology entry point for the aviation manufacturing industry, aircraft design services will benefit from the long-term growth and technological innovation of the aviation industry, possessing a stable and structurally upgrading growth prospect.
