## Abstracts

According to our (Global Info Research) latest study, the global Aircraft Detection Obstacle Lighting System market size was valued at US\$ 554 million in 2025 and is forecast to a readjusted size of US\$ 915 million by 2032 with a CAGR of 7.4% during review period.

By 2025, 4,810 aircraft detection obstacle lighting systems will be installed globally, with an average price of approximately \$112,000 per system and an industry gross profit margin of approximately 28%?34%. This system integrates aircraft radar/ADS-B passive detection modules with high-intensity aviation obstruction light control units, designed to turn off or dim red warning lights when no aircraft are approaching, balancing airspace safety with nighttime light pollution control. Typical device specifications include a coverage radius of 3?5 km, a response time of less than 1 second, redundant communication interfaces (LTE/LoRa/fiber), and an IP66 weatherproof rating. Upstream raw materials primarily include high-power LED modules, radar detection devices (such as millimeter-wave radar antennas), microcontrollers and FPGA modules, communication modules (LTE/LoRa/fiber optic interfaces), corrosion-resistant aluminum alloy housings, and transparent cover materials. Material costs account for approximately 52% of the total system cost. Fixed towers, wind farm pylons, or bridge structures are typically equipped with an ADLS system to control the aviation warning lights on top. HENSOLDT has a mature product line for wind turbine and airport obstruction light detection systems in Europe, with an annual installation volume exceeding 1,000 units.
