Abstracts

Aircraft door are high engineering driven component as compared to conventional counterparts offering superior strength to weight ratio. Industry players are adopting new manufacturing techniques to maintain weight to strength ratio of these components. Manufacturers offering affordable light weight products will positively influence the aircraft door penetration. Industry players are adopting advanced manufacturing processes owing to growing usage of composite materials. These materials reduce overall weight compared to metal parts such as cast aluminum and black aluminum composites. Stringent emission regulations will positively influence the product demand.
