According to our (Global Info Research) latest study, the global Aircraft Engine Overhaul market size was valued at US\$ 3762 million in 2024 and is forecast to a readjusted size of USD 5292 million by 2031 with a CAGR of 5.0% during review period.

During use, aircraft engines experience a variety of complex working environments and high-intensity operations, which may cause wear, aging or damage to engine components. When the engine has problems such as performance degradation, increased vibration, reduced fuel efficiency, or when the scheduled maintenance cycle is reached, an overhaul is required. Overhaul is an important part of preventive maintenance measures, which helps to detect and repair potential problems in a timely manner, prevent small problems from turning into major failures, and thus affect flight safety and operational efficiency.
