Abstracts

Fire protection systems (FPS) are one of the most essential requirements on board aircraft. The impact of fire breakouts can be significantly reduced using Smoke detection and fire Suppression systems as evacuation during flight is impossible. Smoke detectors are usually installed in cabin, crew rest compartments, lavatories, galley complexes, purser work stations, business centers, and video control centers. A dedicated smoke detection system, in some cases, is not installed in the main cabin as cabin crew and passengers can perceive smoke in such areas.

Scope of the Report:

This report focuses on the Aircraft Fire Protection Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
