According to our (Global Info Research) latest study, the global Aircraft Landing Gear market size was valued at USD 10770 million in 2023 and is forecast to a readjusted size of USD 13650 million by 2030 with a CAGR of 3.4% during review period.

Landing gear is the undercarriage of an aircraft, and is used in both takeoff and landing. For aircraft, the landing gear supports the craft when it is not flying, allowing it to take off, land, and taxi without damage. Wheels are typically used but skids, skis, floats or a combination of these and other elements can be deployed depending both on the surface and on whether the craft only operates vertically (VTOL) or is able to taxi along the surface. Faster aircraft usually have retractable undercarriages, which folds away during flight to reduce air resistance or drag.

UTC Aerospace Systems, Safran Landing Systems and Liebherr captured the top three revenue share spots in the Landing Gear market in 2017.
