According to our (Global Info Research) latest study, the global Aircraft and Marine Turbochargers market size was valued at USD 282.7 million in 2023 and is forecast to a readjusted size of USD 314 million by 2030 with a CAGR of 1.5% during review period.

Aircraft and Marine Turbochargers, colloquially known as a turbo used in Aircraft and Marine, is a turbine-driven forced induction device that increases an internal combustion engine's efficiency and power output by forcing extra compressed air into the combustion chamber. This improvement over a naturally aspirated engine's power output is due to the fact that the compressor can force more air—and proportionately more fuel—into the combustion chamber than atmospheric pressure (and for that matter, ram air intakes) alone.

The Global Info Research report includes an overview of the development of the Aircraft and Marine Turbochargers industry chain, the market status of Aircraft (Single Turbo, Twin Turbo), Marine (Single Turbo, Twin Turbo), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Aircraft and Marine Turbochargers.
