Aircraft on Ground is often referred to as AOG in the aviation field. This term is closely related to aviation maintenance. It refers to the state where an aircraft is forced to stop operating due to serious problems and cannot perform flight missions. In this situation, Aircraft on Ground Logistics, as an important branch of 'emergency logistics', undertakes the task of transporting key parts needed to repair the aircraft.

When an aircraft is grounded, repair and maintenance work cannot be delayed, and this requires additional parts support. The efficient operation of Aircraft on Ground Logistics is of decisive significance for quickly resolving aircraft failures and returning them to the sky. It not only minimizes the risk of flight cancellations or delays, but also concerns the reputation maintenance of airlines, revenue protection, and customer trust in their ability to provide regular and reliable services.
