## Abstracts

Aircraft Potable Water Pumps are designed specifically for the potable water systems on aircraft, responsible for delivering drinking water stored on the aircraft to areas such as galleys and lavatories. "Potable" refers to water that is safe to drink, hence these pumps must meet certain health and safety standards to ensure that the water is not contaminated during transport. The design and operation of these pumps must be able to adapt to pressure variations and other environmental factors that can be encountered during flight.
