According to our (Global Info Research) latest study, the global Aircraft Propeller Governors market size was valued at USD 11 million in 2023 and is forecast to a readjusted size of USD 14 million by 2030 with a CAGR of 2.8% during review period.

A governor is an engine rpm-sensing device and high-pressure oil pump. In a constant-speed propeller system, the governor responds to a change in engine rpm by directing oil under pressure to the propeller hydraulic cylinder or by releasing oil from the hydraulic cylinder. The change in oil volume in the hydraulic cylinder changes the blade angle and maintains the propeller system rpm. The governor is set for a specific rpm via the cockpit propeller control, which compresses or releases the governor speeder spring.
