Aircraft propeller is a part of the aircraft propulsion system which provides the thrust essential for the aircraft to move in the air. Aircraft propeller consists of two or more blades connected together by a hub. The blades of aircraft propeller are in the shape of an airfoil. When engine rotates the blades of aircraft propeller system produce lift, also known as thrust. This thrust enables the aircraft to move forward.

Scope of the Report:

This report focuses on the Aircraft Propeller Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Increase in demand for light-weight and fuel-efficient aircraft in the recent years and also for special light-sport aircraft (SLSA) are estimated to drive the aircraft propeller system market in the next few years. Extensive efforts have been made by researchers and technologists to improve the design of the blades used in the aircraft propeller system and to increase the efficiency of the system in order to reduce the consumption of fuel. Rise in demand for turboprop engine aircraft for military, civil, and commercial applications in the recent years is anticipated to promote the growth of the aircraft propeller system market during the forecast period. However, the manufacturing cost of aircraft propeller system and the maintenance cost of turboprop engine aircraft are high. Another drawback is that the light-sport aircraft (LSA) provides seating space for no more than two people. Efficiency of turboprop engine aircraft declines at high altitude. Furthermore, stringent regulations and norms have been imposed on the design of the blades used in the aircraft propeller system in order to ensure safe operations. These drawbacks are anticipated to hinder the growth of the aircraft propeller system market in

the near future.

The worldwide market for Aircraft Propeller Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
