The global Aircraft Rental Service market size is expected to reach \$ 16720 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Aircraft Rental Service refers to a business model where airlines, corporations, or government agencies acquire the right to use civil or commercial aircraft through leasing. Leasing companies typically offer flexible dry or wet lease options, allowing clients to expand capacity, meet seasonal route demands, or conduct short-term project operations without the need for a one-time purchase of expensive aircraft assets. This service is widely used in air transport, charter flights, cargo, private flying, and training, with its core value lying in reducing capital expenditure, optimizing fleet flexibility, and diversifying operational risks.

With the continued growth in global air travel demand, the expansion of low-cost and regional aviation markets, and the increasing demand from airlines for capital cost control and fleet renewal, the Aircraft Rental Service market maintains steady growth. Meanwhile, the rapid expansion needs of emerging market airlines and the increased activity in the second-hand aircraft market also provide opportunities for leasing. Furthermore, environmental pressures and fuel efficiency upgrades are driving fleet upgrades, making leasing more advantageous than direct purchase. It is expected that in the future, with the recovery of air transport, increased demand for charter and cargo flights, and the emergence of innovative financial leasing services, the global aircraft leasing market will continue its long-term growth trend.
