Abstracts

The global Aircraft Skid Landing Gear market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The aircraft skid landing gear has the characteristics of simple structure and light weight, and can flexibly take off and land in very narrow environments such as rooftops. The skid landing gear has good terrain adaptability and can help the helicopter take off and land on slippery, soft, rugged ground such as grassland, beach, and Gobi.

The aircraft skid landing gear is a helicopter landing device that is composed of transverse members and longitudinal skids and relies on the elastic deformation of the structure to absorb energy and act as a buffer. The aircraft skid landing gear is mainly suitable for small aircraft and helicopters.

This report studies the global Aircraft Skid Landing Gear production, demand, key manufacturers, and key regions.
